

Please add the following new claims:

47. A portable terminal formed by connecting a main unit and a flip unit having a monitor screen by an axial unit rotatably, comprising:

said flip unit is connected rotatably by an axis which crosses perpendicularly with said axial unit.

48. A portable terminal as set forth in Claim 47, wherein

A3
said axial unit is provided with a photographic lens.

49. A portable terminal as set forth in Claim 47, wherein

a state sensor for detecting positional relationship of the flip unit and the main unit, and
a means for executing selectively functions beforehand assigned corresponding to the positional relationship based on the relationship of the flip unit and the main unit detected by said state sensor.

50 A portable terminal formed by connecting a main unit and a flip unit having a monitor screen by an axial unit rotatably, comprising:

a plurality of functions for performing are provided,

a state sensor for detecting positional relationship of the flip unit and the main unit, and

a means for executing selectively functions beforehand assigned corresponding to the positional relationship based on the relationship of the flip unit and the main unit detected by said state sensor.
